Akalazu Udochukwu David

Software Engineer · Full-Stack · Technical Project Manager

akalazuudochukwu@gmail.com · (+234) 903 594 6770 · Nigeria — open to relocation & remote

ABOUT

Backend-focused engineer with a strong record of shipping and owning features on live, multi-tenant SaaS products used daily by schools, businesses, and content creators across Nigeria. Experienced working across the full delivery cycle — from system design and API architecture through debugging production issues under pressure. Promoted to Technical Project Manager at 30 Cycle after consistently delivering as a backend engineer, and now leads cross-functional delivery on an analytics platform serving Africa's creator economy. Writes clean, maintainable PHP and JavaScript, thinks carefully about database design, and takes ownership seriously.

AT A GLANCE

4+	60+	4.75 / 5.0
Years of experience	Production issues resolved	CGPA — Best graduate

CORE SKILLS

Backend	PHP (OOP, MVC) · REST API Design & Versioning · Session & Token-based Auth · Background Processing · Server-side Caching
Frontend	JavaScript (ES6+) · TypeScript · React.js · Async/Await · Fetch API · Responsive & Accessible UI
Databases	MySQL — schema design, indexing, query optimisation, complex joins, stored procedures · SQLite
System Design	Multi-tenant SaaS Architecture · RBAC · Modular Monolith · Payment Gateways (Paystack, Flutterwave) · Social Media & CRM APIs
Engineering	Git & GitHub · Production Debugging · Root Cause Analysis · Technical Documentation · Agile / Sprint Delivery
AI-Augmented	Claude AI · GitHub Copilot — integrated into daily development to accelerate output and maintain quality

EXPERIENCE

Technical Project Manager [{badge}]

2025 – Present

30 Cycle

Leads end-to-end delivery of cross-platform creator analytics, influence scoring, audience insights, and the SME/agency campaign management portal for Africa's creator economy. Owns the bridge between engineering and product — translating business requirements into developer-ready technical specifications, reducing sprint ambiguity and rework. Introduced structured sprint ceremonies (planning, reviews, retrospectives) that improved delivery rhythm and release predictability. Previously as Backend Developer: architected PHP + MySQL data pipelines ingesting creator metrics from multiple social APIs, and built the RESTful API layer powering the platform's analytics dashboards.

Software Engineer

2024 – 2026

Edves

Owned resolution of 60+ production issues on a multi-tenant School Management SaaS serving hundreds of Nigerian schools — spanning result template rendering, score calculations, attendance, CBT assessments, billing, and mobile app stability. Built and maintained dynamic end-of-term and mid-term report templates with school-specific customisations. Improved the CBT module, delivered UX upgrades for destructive actions, enhanced the Analytics Dashboard, and contributed to billing and financial features.

Backend Developer
2023 – 2025

Pamtech Group

Designed and built PHP/MySQL backend systems for oil & gas operations, supporting 100+ daily users. Engineered an automated Check-In/Check-Out system that improved workforce management efficiency by 20%. Developed a full e-commerce platform for auto parts contributing to a 15% revenue increase in Q1. Reduced average query execution time by 25% through targeted indexing and caching.

Front-End Developer
Feb 2024 – May 2024

Revna Biosciences, Accra, Ghana

Built responsive, accessible web interfaces for biosciences digital platforms using React and modern component patterns. Achieved a 30% improvement in page load speed through code splitting, lazy loading, and asset optimisation.

Freelance Backend Developer
Jan 2022 – Nov 2024

Independent Consulting

Delivered backend systems for clients across multiple industries using PHP and MySQL — CMS builds, internal tools, and API-integrated platforms. Integrated Paystack, Flutterwave, CRM systems, and analytics APIs. Acted as sole technical point of contact on several engagements, owning architecture decisions, client communication, and delivery timelines.

JavaScript Instructor
May 2020 – Nov 2021

STGEI International

Designed and delivered a structured JavaScript curriculum from fundamentals through advanced application development. Achieved a 75% graduate employment rate — students placed into professional developer roles within months of completing the programme.

SELECTED PROJECTS

Gagner for Schools — AI-Powered School Management SaaS

PHP · JavaScript · MySQL · REST APIs · AI Integration

Architected a multi-tenant SaaS platform managing academic, administrative, and financial operations for Nigerian primary and secondary schools. Implemented modular RBAC dashboards for four user roles (Student, Teacher, Admin, Super Admin), CBT with automated result processing, and a PIN-based result access system modelled on WAEC's infrastructure. Integrated AI-driven personalised learning: adaptive quizzes, intelligent tutoring, performance analytics, and skill-based certification.

Trenvid — Trending Video Aggregation Platform

JavaScript · PHP · MySQL · YouTube & TikTok APIs

Built a high-performance content aggregation platform pulling trending videos from YouTube and TikTok in real time, with infinite scrolling, dynamic filtering, and asynchronous loading. Engineered a custom multi-platform embed system with automatic fallbacks and controlled third-party content handling.

9jabrief — News Aggregation Platform

PHP · MySQL · SEO · REST APIs

Built a real-time news platform with sub-5-second content latency, personalised filtering (40% discoverability improvement, 25% retention boost), and sustained 99.9% uptime under traffic surges. SEO improvements drove 50% organic traffic growth over 6 months.

EDUCATION

B.Tech — Software Engineering
2024

Federal University of Technology, Owerri

CGPA: 4.75 / 5.0 · Best Graduating Student, Dept. of Software Engineering · Best Performing Student across 3 consecutive academic sessions · Class Representative
