AKALAZU UDOCHUKWU DAVID

Software Engineer · Full-Stack · Technical Project Manager

akalazuudochukwu@gmail.com | (+234) 903 594 6770 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Backend-focused engineer with a strong record of shipping and owning features on live, multi-tenant SaaS products used daily by schools, businesses, and content creators across Nigeria. Experienced working across the full delivery cycle — from system design and API architecture through debugging production issues under pressure. Promoted to Technical Project Manager at 30 Cycle after consistently delivering as a backend engineer, and now leads cross-functional delivery on an analytics platform serving Africa's creator economy. Writes clean, maintainable PHP and JavaScript, thinks carefully about database design, and takes ownership seriously. Ready to step into a mid-level or senior role where engineering depth and delivery accountability matter.

TECHNICAL SKILLS

Backend: PHP (OOP, MVC patterns), REST API design & versioning, session & token-based auth, background processing, server-side caching

Frontend: JavaScript (ES6+), TypeScript, React.js, async/await, Fetch API, responsive and accessible UI

Databases: MySQL — schema design, indexing, query optimisation, complex joins, stored procedures; SQLite

System Design: Multi-tenant SaaS architecture, role-based access control (RBAC), modular monolith patterns, third-party API integration (payment gateways, social media APIs, CRM systems)

Engineering Practices: Git & GitHub (feature branching, PR-based review), production debugging, root cause analysis, technical documentation, agile/sprint delivery

AI-Augmented Workflow: Claude AI, GitHub Copilot — integrated into daily development to accelerate output and maintain code quality

PROFESSIONAL EXPERIENCE

Software Engineer | Edves. *2024 – 2026*

Edves is a multi-tenant School Management SaaS serving hundreds of schools across Nigeria — covering academics, assessments, billing, and communication.

- Owned resolution of 60+ production issues spanning result template rendering, score calculations, attendance, CBT assessments, billing, and mobile app stability — consistently assigned the most complex, cross-cutting tickets.
- Built and maintained dynamic end-of-term and mid-term report templates with school-specific layout customisations, accurate grade and position calculations, and support for milestone-based (Early Years) assessments.
- Debugged and fixed score display, result division, and percentage calculation bugs affecting live student results — issues with direct impact on school operations and parent trust.
- Improved the CBT module: fixed quiz routing to the correct student-facing assessment experience, added deletion confirmation modals for exams and questions, and resolved subject dropdown failures on formative assessments.
- Delivered UX improvements across destructive actions — introduced confirmation modals for student deletion, payment removal, homework deletion, and attendance deletion, reducing accidental data loss.
- Enhanced the Analytics Dashboard with a date-range dropdown selector, rolling six-month data window, dual calendar-based date filters, and renamed KPI cards to accurately reflect product metrics.
- Investigated and resolved mobile app login failures for teachers and students across multiple schools — traced root causes and restored access with minimal downtime.
- Contributed to billing and financial features: bank additions, optional bill visibility controls for parents, and portal currency configuration.

Technical Project Manager (promoted from Backend Developer) | 30 Cycle *2025 – Present*

30 Cycle builds data infrastructure for Africa's creator economy — unifying cross-platform analytics for creators, brands, and agencies.

- Promoted to TPM after leading successful delivery of core platform features as backend engineer — recognition of both technical output and cross-team communication.
- Lead end-to-end delivery of product features including cross-platform creator analytics, influence scoring, audience insights, and the SME/agency campaign management portal.
- Own the bridge between engineering and product — translating business requirements into developer-ready technical specifications, reducing sprint ambiguity and rework cycles significantly.
- Introduced structured sprint ceremonies (planning, reviews, retrospectives) that improved team delivery rhythm and release predictability.
- Previously as Backend Developer: architected PHP + MySQL data pipelines ingesting creator metrics from multiple social APIs, and built the RESTful API layer powering the platform's analytics dashboards.

Backend Developer | Pamtech Group *2023 – 2025*

- Designed and built backend systems in PHP and MySQL supporting oil & gas operations — including staff management, reporting, and internal tooling used daily by 100+ employees.
- Engineered an automated Check-In/Check-Out system with real-time operational reporting, improving workforce management efficiency by 20%.
- Developed a full e-commerce platform for auto parts — covering product catalogue, order management, secure payment processing, and delivery tracking — contributing to a 15% revenue increase in Q1.
- Improved database performance by auditing slow queries, introducing targeted indexes and caching layers, reducing average query execution time by 25%.

Front-End Developer | Revna Biosciences *(Accra, Ghana)* *Feb 2024 – May 2024*

- Built responsive, accessible web interfaces for biosciences digital platforms using React and modern component patterns.
- Optimised front-end performance, achieving a 30% improvement in page load speed through code splitting, lazy loading, and asset optimisation.

Freelance Back-End Developer | Independent Consulting *Jan 2022 – Nov 2024*

- Delivered backend systems for clients across multiple industries using PHP and MySQL — including CMS builds, internal tools, and API-integrated platforms.
- Integrated third-party services including payment gateways (Paystack, Flutterwave), CRM systems, and analytics APIs.
- Acted as sole technical point of contact on several engagements, owning architecture decisions, client communication, and delivery timelines.

JavaScript Instructor | STGEI International *May 2020 – Nov 2021*

- Designed and delivered a structured JavaScript curriculum from fundamentals through advanced application development.
- Achieved a 75% graduate employment rate — students placed into professional developer roles within months of completing the programme.

SELECTED PROJECTS

Gagner for Schools — AI-Powered School Management SaaS — *PHP · JavaScript · MySQL · REST APIs · AI Integration*

- Architected a multi-tenant SaaS platform managing academic, administrative, and financial operations for Nigerian primary and secondary schools — built from the ground up.
- Implemented modular RBAC dashboards for four user roles (Student, Teacher, Admin, Super Admin), computer-based testing with automated result processing, and a PIN-based result access system modelled on WAEC's infrastructure.
- Integrated AI-driven personalised learning features: adaptive quizzes, intelligent tutoring, performance analytics, and skill-based certification — alongside commercial pricing models with real-time payment tracking.

Trenvid — Trending Video Aggregation Platform — *JavaScript · PHP · MySQL · YouTube & TikTok APIs*

- Built a high-performance content aggregation platform pulling trending videos from YouTube and TikTok in real time — with infinite scrolling, dynamic filtering, and asynchronous loading.
- Engineered a custom multi-platform embed system with automatic fallbacks, HTML escaping, and controlled third-party content handling to ensure security and cross-browser compatibility.

9jabrief — News Aggregation Platform — *PHP · MySQL · SEO · REST APIs*

- Built a real-time news platform with sub-5-second content latency, personalised filtering (improving discoverability by 40% and retention by 25%), and sustained 99.9% uptime under traffic surges.
- SEO improvements drove 50% organic traffic growth over 6 months.

EDUCATION

B.Tech — Software Engineering | Federal University of Technology, Owerri *2024*

- CGPA: 4.75/5.0 — Best Graduating Student, Department of Software Engineering
- Best Performing Student across 3 consecutive academic sessions · Class Representative
